EXPERIENCE

Since joining WJE in 1995, Bryan Rouse has performed hundreds of evaluations and investigations of distressed and deteriorated conditions in existing buildings and other structures. His projects include high-rise and low-rise buildings; historical buildings; structural steel buildings; conventionally reinforced concrete structures; timber-framed structures; stone, brick, and terra cotta exterior facades; stucco and plaster finishes; EIFS; gypsum wallboard; glass and metal curtain walls; fire- and water-damaged structures; and architectural and structural design coordination. His responsibilities have included designing repairs, developing construction documents, and providing field observation services for repair work during the construction phase. He draws on his experience with existing construction to provide enclosure consulting during design and construction of new construction projects, helping stakeholders avoid problems before the project is occupied. Mr. Rouse has also assisted several project teams in providing litigation assistance in construction-related lawsuits and mediation.

REPRESENTATIVE PROJECTS

Failure/Damage Investigation

- McCormick Place Convention Center - Chicago, IL: Building enclosure review for multiple buildings
- University Place Hotel - Indianapolis, IN: Building envelope review
- 65 East Goethe - Chicago, IL: Limestone cladding
- Marshall Field's (now Macy's) - Chicago, IL: Terra cotta and granite cladding
